Center for Positive Behavioral Interventions and Supports
University of Connecticut

The purpose of this document is to provide a brief description of the similarities and differences between two variations of multi-tiered positive behavior support systems.

The implementation of program-wide positive behavior support in early childhood programs through the Pyramid Model (also referred to as Program-Wide PBS) provides a tiered intervention framework of evidence-based interventions for promoting the social, emotional, and behavior development of infants, toddlers, and preschoolers who are typically developing and who have or are at risk for development delays or disabilities (http://www.pyramidmodel.org).

The Positive Behavioral Interventions and Supports (PBIS; used interchangeably with School-Wide Positive Behavior Supports or SWPBS) framework is also a multi-tiered system designed to assist school personnel in adopting and organizing evidence-based behavioral interventions into an integrated continuum that enhances academic and social behavior outcomes for all students (www.pbis.org).

Both Program-Wide PBS and PBIS emphasize evidence-based practices, behavior analysis, prevention and behavioral sciences, learner outcomes, embedded training and coaching, capacity building, explicit teaching and instruction, and continuous progress monitoring and evaluation. They differ primarily with regard to the chronological age and developmental stage, that is, infants, toddlers, and preschoolers versus school-age children and youth.

The following table provides a side-by-side comparison of the similarities and differences by features of the program-wide implementation of the Pyramid Model and the PBIS framework.

<th>Program-Wide PBS using the Pyramid Model</th>
<th>School-wide PBIS</th>
</tr>
</thead>
</table>
| **Child/Student Outcomes** | • Decreases in behavior incidents by type, location, activity, by child  
• Decreases in ratings of child problem behavior  
• Increases in ratings of child social emotional skills  
• Percentage of children who receive developmental and behavioral screenings on regular schedules;  
• Increase in family involvement and support  
• Decreases in child expulsion  
• Decreases in mental health referrals  
• Decreases in staff turnover  
• Improved staff satisfaction | • Decreases in norm or rule violating behaviors by type, location, time of day, and student  
• Decreases in school suspensions and expulsions  
• Increases in self-management and self-regulation  
• Improvements in perceived school safety  
• Increases in attendance  
• Decreases in special education referrals  
• Decreases in mental health referrals  
• Decreases in reported instances of bullying and victimization  
• Improvements in school climate |
| **Evidence-based Practices** | **Classroom**  
• Use evidence-based practices for establishing relationships with children and providing a quality and developmentally appropriate learning environment including (a) joining in children's play, (b) engaging in supportive conversations, (c) providing encouragement and descriptive feedback, (d) designing the environment and activities to promote child engagement, (e) teaching rules and expectations, (f) structuring transitions, (g) providing | **Classroom**  
• Maximize structure by (a) effectively designing the classroom and (b) teaching, monitoring, and reinforcing classroom routines  
• Teach, monitor, reinforce, and reteach school-wide expected behavior in the classroom  
• Use effective instructional practices (e.g., high quality and quantity of opportunities to respond)  
• Provide immediate and specific feedback to acknowledge appropriate behavior and respond to inappropriate behavior |
