## YOUNG CHILD PTSD CHECKLIST (YCPC)

### TRAUMATIC EVENTS

AN EVENT MUST HAVE LED TO SERIOUS INJURY OR BE PERCEIVED AS IF IT COULD HAVE LED TO SERIOUS INJURY TO THE CHILD, OR TO ANOTHER PERSON (USUALLY A LOVED ONE) AND THE CHILD WITNESSED IT, AND IS USUALLY SUDDEN AND/OR UNEXPECTED.

0 = Absen Frequency is the number of events the child can re- of age.			children start ren	nembering ever	nts around 3 years

Not at all	Once a week or less/ once in a while	2 to 4 times a week/ half the time	5 or more times a week/ almost always		Every	day		
1. Does you his/her ov	r child have intrusive mem	nories of the trauma? Do	oes s/he bring it up on	0	1	2	3	4
•	r child re-enact the trauma just like the trauma. Or do		s? This would be scenes /herself or with other kids?	0	1	2	3	4
3. Is your ch	nild having more nightmare	es since the trauma(s) or	ccurred?	0	1	2	3	4
isn't? This		like they are back in the	him/her again, even when it traumatic event and aren't appens.	0	1	2	3	4
	trauma(s) has s/he had e nap him/her out of it but s/h		ns to freeze? You may have	0	1	2	3	4
6. Does s/he	e get upset when exposed	to reminders of the ever	nt(s)?	0	1	2	3	4
Or, a child Or, a child	ple, a child who was in a c d who was in a hurricane r d who saw domestic violer who was sexually abused	night be nervous when it	nen other people argue.					
•	r child get physically distrenation aking hands, sweaty, shou	•		0	1	2	3	4

Think of the same type of examples as in #6.

0	1	2	3		4			
Not at all	Once a week or less/ once in a while	2 to 4 times a week/ half the time	5 or more times a week/ almost always		Every	day		
-	-	_	I him/her of the trauma(s)? s s/he walk away or change	0	1	2	3	4
For example Or, a child wor, a child woccurred. Or, a girl wh	child try to avoid things or e, a child who was in a ca who was in a flood might who saw domestic violence no was sexually abused no was abused before.	ar wreck might try to aver tell you not to drive ove ce might be nervous to	oid getting into a car. r a bridge.	0	1	2	3	4
•	child have difficulty reme locked out the entire eve	•	dent?	0	1	2	3	4
11. Has s/he lo	ost interest in doing thing	s that s/he used to like	to do since the trauma(s)?	0	1	2	3	4
	rauma(s), does your child ared to before?	d show a restricted rang	ge of emotions on his/her	0	1	2	3	4
•	child lost hope for the futuor will never be good at a		believes will not have fun	0	1	2	3	4
	rauma(s) has your child l nbers, relatives, or friend		nd detached from	0	1	2	3	4
15. Has s/he h	ad a hard time falling asl	eep or staying asleep s	ince the trauma(s)?	0	1	2	3	4
-	child become more irritab trums since the trauma(s		anger, or developed extreme	0	1	2	3	4
17. Has your c	child had more trouble co	ncentrating since the tra	auma(s)?	0	1	2	3	4
	een more "on the alert" f d for danger?	or bad things to happer	n? For example, does s/he	0	1	2	3	4
•	-		(s)? For example, if there's s/he jump or seem startled?	0	1	2	3	4
•	child become more physic ing, or breaking things.	cally aggressive since the	ne trauma(s)? Like hitting,	0	1	2	3	4
21. Has s/he b	ecome more clingy to yo	u since the trauma(s)?		0	1	2	3	4

0 Not at all	1 Once a week or less/ once in a while	2 2 to 4 times a week/ half the time	3 5 or more times a week/ almost always		4 Every	day		
22. Did night terrors start or get worse after the trauma(s)? Night terrors are different from nightmares: in night terrors a child usually screams in their sleep, they don't wake up, and they don't remember it the next day.						2	3	4
23. Since the trauma(s), has your child lost previously acquired skills? For example, lost toilet training? Or, lost language skills? Or, lost motor skills working snaps, buttons, or zippers?				0	1	2	3	4
<u>seem relat</u> What abou	rauma(s), has your child ed to the trauma(s)? It going to the bathroom a afraid of the dark?	, ,	rs about things that <u>don't</u>	0	1	2	3	4

## **FUNCTIONAL IMPAIRMENT**

Do the symptoms that you endorsed above get in the way of your child's ability to function in the following areas?

0 Hardly ever/ none	1 Some of the time	2 About half the days	3 More than half the days	4 Everyday				
, , ,	oms) substantially "get ationship, or make you t	in the way" of how s/he g feel upset or annoyed?	ets along with you, into	erfere 0	1	2	3	4
•	symptoms) "get in the v them feel upset or anno	vay" of how s/he gets alo	ng with brothers or sist	ters, 0	1	2	3	4
27. Do these ( average?	symptoms) "get in the v	vay" with the teacher or th	ne class more than	0	1	2	3	4
, , ,	oms) "get in the way" of in your neighborhood?	how s/he gets along with	n friends at all – at day	care, 0	1	2	3	4
with an ave	erage child?" to go out with your child	you to take him/her out i	•	pe 0	1	2	3	4
30. Do you th	ink that these behaviors	s cause your child to feel	upset?	0	1	2	3	4

#### **A CAUTION**

PTSD is one of the more difficult disorders for which to assess and a checklist (as opposed to an interview with the assistance of an interviewer) is guaranteed to lead to some inaccurate responses. These challenges have been written about elsewhere (Cohen and Scheeringa, 2009; Scheeringa, 2011). This checklist is not recommended when a structured interview with a well-trained interviewer is available and feasible. This is not meant to make diagnoses of PTSD. This checklist is intended for specific research purposes, quick repeated assessments during treatment, or for large-scale efficient means of measurement.

#### YCPC BACKGROUND

The Traumatic Events page is important to include before administering the symptom portion because it is important to know all of the traumatic events one has experienced that may be linked to symptoms. There is a natural tendency to avoid remembering painful events. Events in the more distant past may be more difficult to recall. This page provides a systematic menu to facilitate recall of all events.

Symptoms are scored for totality of events in contrast to many other checklists that rate for only one event.

The item descriptors are longer than those in other PTSD checklists because of multiple concerns that respondents misunderstand these symptoms (Cohen and Scheeringa, 2009; Scheeringa, 2011). Relative to other disorders, many PTSD symptoms tend to be more complicated because they are abstract, require two- or three-step connections to past events. Furthermore, many caregivers do not have PTSD, so they do not have a frame of reference to understand these symptoms in their children. Everyone understands straightforward symptoms like depression or hyperactivity, but not everyone understands, for example, transient anticipatory avoidance of a triggered reminder in the present that somewhat resembles a life-threatening event from the past. For distress at reminders and avoidance of reminders in particular, the triggers are unique to each person's event. Therefore, lists of potential triggers are written out for different types of traumatic events to try to jog caregivers' memories for these transitory symptoms.

#### **SCORING**

Sum the scores from items 1-24. Suggested cutoffs are based on two tiers. The highest tier is a "probable diagnosis" level. Young children with a diagnosis by developmentally-sensitive alternative criteria for PTSD in a clinic sample tend to have about 10 symptoms (Scheeringa et al., 1995). However there are five extra items (items 20-24) beyond the DSM-IV symptoms in this checklist, so this would translate into approximately 13 symptoms. If the symptoms averaged a score of 2, this would translate into a Total score of 26. The lower tier is a "clinical attention" level. Even when youth do not have enough symptoms for a diagnosis, they can still have symptoms and functional impairment (Scheeringa et al., 2005), and would benefit from treatment. This is conceptualized at the 6-symptom level (approximately four DSM-IV symptoms plus two extra from items 20-24), or a Total score of 12.

		Clinical	Probable
	<u>Items</u>	Attention Cutoff	Diagnosis Cutoff
Re-experiencing	1-7	4	8
Avoidance and numbing	8-14	2	4
Increased arousal	15-19	4	10
Total	1-24	12	26
Functional impairment	25-30	2	4
